Bold = primary key · italic = foreign key (>table) · dot = the side that holds the key · a container is the unit every amount resolves to · every table carries the account and company it belongs to

Tables, one line each

Field lists are the essentials; timestamps and created_by exist on every table.

Module	Table	Fields	Meaning
Spine	**account**	id, name, package A|B, owner_user_id >user, status, created_at	One paying tenant: a single company or a group
Spine	**company**	id, >account_id, legal_name, country · currency, tin · address, kind branch|partner, bills_client, handover_stage	A legal company or a branch; owns one book
Spine	**bank_account**	id, >company_id, bank · number, currency · swift, pending_change, approved_by	Prints on invoices; four-eyes to change
Spine	**user**	id, >account_id, >company_id (null = all), name · email, role (6), suspended, otp_mailbox	One person, one role, one company or all
Spine	**feature_switch**	id, >account_id, >company_id, feature, enabled	Which modules are on for this account
Spine	**audit_event**	id, >account_id, >user_id, module · action, entity · entity_id, before · after, at	Append-only; nobody edits or deletes
Operations	**client**	id, >company_id, name · code, address · tin, contact	The buyer that gets invoiced
Operations	**booking**	id, >company_id, shipping_line, booking_no, >client_id, cargo · service, booked_at	Shipping line first; it sets the number shape
Operations	**container**	id, >booking_id, number ISO 6346 (unique), size · lot_no, status · stage, >responsible_company_id, closed_at · pnl_month	The unit of truth; every amount resolves here
Operations	**stage_event**	id, >container_id, stage (8), confirmed_by >user, at, flips_company	A confirmed stage; one of them is the hand-over
Operations	**document**	id, >container_id, type (checklist), file · status, attached_by >user	Per-container papers: RMB, ICGLR, B/L…
Operations	**transport_leg**	id, >company_id, seq · type local|transit, truck · driver, >transporter (beneficiary), agreed_cost · currency, status, >replaces_leg_id · md_ok	One hire, one truck, one cost; chain per container
Operations	**leg_container**	>leg_id, >container_id	Which boxes rode on that leg
Operations	**checkpoint_event**	id, >container_id, type TRA|police|…, in_at · deadline, out_at	Optional; most legs have none
Operations	**cost_entry**	id, >container_id, >company_id, category · amount, currency · rate · usd, >paid_to (beneficiary), entered_by >user, delay_flag · split_group	Operations trail; a shared bill splits into several
Operations	**tip_entry**	id, >company_id, reason · amount · currency, paid_by >user, payee_type · momo_ref, stage_tag · >checkpoint_id, offline_id · at	Three taps; append-only; completed later
Operations	**tip_container**	>tip_id, >container_id, share	A tip paid for several boxes splits
Payments, blind trail, compare	**beneficiary**	id, >company_id, name · type, account_no · bank, verified, change_pending	Protected accounts; four-eyes on change
Payments, blind trail, compare	**payment_order**	id, >company_id, >container_id, >cost_entry_id, >beneficiary_id, amount · currency, status req|appr|rej|paid|locked, requested_by · approved_by · paid_by	Requested → approved → paid → locked
Payments, blind trail, compare	**float**	id, >user_id, amount · currency, issued_at, settled_at	Cash in staff hands
Payments, blind trail, compare	**finance_record**	id, >company_id, >container_id, category · amount · currency, >beneficiary_id, entered_by >user, from_document	Finance trail, entered blind from paper
Payments, blind trail, compare	**reconciliation_flag**	id, >cost_entry_id, >finance_record_id, difference, status, ruling · ruled_by >user	Compare job output; the MD rules, nothing is overwritten
Payments, blind trail, compare	**md_queue_item**	id, >account_id, kind dup_container|repeat_pay|replacement_leg, refs, status, ruled_by >user	Cases that never resolve locally
Invoices and accounting	**rate_card**	id, >company_id, >client_id, route · size, usd_per_box	Drives the auto-built invoice
Invoices and accounting	**invoice**	id, >company_id, number (gapless), direction AR|AP, >client_id | >beneficiary_id, issued_at · currency, total · paid · status	AR or AP, never mixed; issued by the billing company
Invoices and accounting	**invoice_line**	id, >invoice_id, >container_id, description, amount	One line per container
Invoices and accounting	**credit_note**	id, >invoice_id, amount · reason, issued_at	The only way to change an issued invoice
Invoices and accounting	**expense**	id, >company_id, category · amount, due · recurring, >payment_order_id	Rent, utilities, bills (module)
Invoices and accounting	**payroll_run**	id, >company_id, month · total, status, >payment_order_id	Payslips through the same approval (module)
Invoices and accounting	**journal_entry**	id, >company_id, source doc · ref, debit · credit, period · locked	Ledger, generated from documents (module, later)
Owner portal and platform	**subscription**	id, >account_id, package, companies · boxes_limit, started · status	What the account is on
Owner portal and platform	**subscription_invoice**	id, >account_id, period · amount, status · due, reminders_sent	Issued on the 1st by the platform
Owner portal and platform	**support_ticket**	id, >account_id, >user_id, subject · severity, status · owner	Raised from Ask for help, context attached
Owner portal and platform	**notification**	id, >user_id, event · channel, sent_at · read_at	Bell, email, SMS, digest
Owner portal and platform	**release**	version, date, notes	One version for every tenant

Eight rules the schema enforces

1. **Every table carries account_id, and company_id where money or a container is involved.** The data layer adds the filter automatically from the signed-in user's token. A user attached to one company can never query another company's rows.
2. **The container is the unit of truth.** cost_entry, tip_container, invoice_line, finance_record, stage_event and document all point at one container. A booking total or a month total is a query, never a stored number.
3. **Two trails, one link.** cost_entry is what Operations said; finance_record is what the paper said, entered blind. reconciliation_flag pairs them when they differ. Neither row is ever overwritten; the MD's ruling is a third record.
4. **Money is stored in minor units as integers** with the rate on the row, converted to USD at each cost's own date. Never floating point.
5. **Append-only where it matters.** audit_event, tip_entry and locked payment_order rows are never updated or deleted. A change is a new row.
6. **Hand-over is one flip.** stage_event with flips_company moves the container's responsible_company_id; working lists and cost defaults follow from that one field. A branch keeps the same book; a partner company has its own.
7. **Modules own their tables.** transport_leg, checkpoint_event, tip_entry, expense, payroll_run and journal_entry can be switched off per account through feature_switch; their rows stay readable in reports.
8. **The owner sees counts.** subscription, subscription_invoice and support_ticket reference the account only. No platform table references a container, an invoice or a payment.
